

Ecoset Ultra Mini Sensor

The EECOSSET Ultra Mini is a discreet recessed PIR and daylight sensor designed for seamless energy-saving application. This compact 3-wire unit provides comprehensive 360-degree detection, accurately triggering lighting based on occupancy while offering the unique flexibility of a manual override option via switch.

- Features a low-profile design requiring a small 40mm cutout for a subtle, unobtrusive ceiling finish.
- Features adjustable time delays (10 seconds to 15 minutes) and lux levels (3lx to 2000lx), allowing you to precisely tailor the sensor's sensitivity and duration to any environment.
- Supports a substantial maximum LED load of 400W, making it suitable for high-output lighting in both residential and commercial applications.
