13. 1-10V Control/Dimmable Highbay (ECOHB120W850G6, ECOHB170W850G6):

DIM Characteristics

By connecting a 1-10V Control or dimmer across Dim(+) and Dim(-), the output current can be adjusted

Voltage Control	Minimum	Typical	Maximum
Control Voltage	1V		10V
Source Current			1mA

ECOHB120W850G6(1-10V Dimmable Highbay) or ECOHB170W850G6(1-10V Dimmable Highbay)

Signal Cables - 2 extra wires on the Dimmable Pierlux G6 Highbay

There are two extra control wires on the highbay with labelled PURPLE DIM+, GRAY DIM-. These are the signal cables to control low voltage amount being sent to the LED driver. The Pierlux dimmable highbay is built with an integrated driver that is 1-10V controllable. Thus, the highbay lights output will be adjusted according to the dimmer/control 1-10V input.

Just connect the 2 extra wires to a switch/dimmer that generates 1-10V input. This controls the power LED high bay will receive therefore changing the highbay light output.

If the 2 extra control wires are not connected to any input, the highbay will not be dimmable. And it will run just normally as a regular highbay.
